

Pavel Belinovich

Senior Frontend / Fullstack Developer (React, TypeScript, Node.js)

 pbelinovich

 pbelinovich

 shallowones@yandex.ru

Professional Summary

Senior Frontend / Fullstack Developer with 10+ years of experience, including 7 years building digital banking and fintech solutions for top Russian banks (VTB, Gazprom Bank, UBRiR, Otkritie) with React, TypeScript, and Node.js. Since 2026 — founder and architect of the Vglub SaaS product: brought a platform with E2E encryption (152-FZ), real-time SSE, and AI features to pre-release using agentic AI development (Claude Code, Codex) under my own architecture and review. Previously — a low-code platform migration to RavenDB and a DOM-based code editor.

Key Skills

Frontend

JavaScript React TypeScript Redux
Tailwind CSS Web Workers WebSocket
SCSS/CSS

Backend & Databases

Node.js Express Hono RavenDB
REST API SSE gRPC

AI & Machine Learning

Claude Code Codex Cursor
LLM Integration Fine-tuning (LoRA)
Ollama

Tools

Jest Playwright Webpack Docker
GitHub Actions Yandex Cloud

Work Experience

Mar 2026 – Present

Founder / Software Architect

Vglub (vglub.space)

Russia, Saint Petersburg

- Founded Vglub, a SaaS product for psychologists and coaches — a workspace with session templates, clinical assessments, and an AI supervisor — and brought it to pre-release in partnership with a design studio owner
- Designed the architecture and single-handedly brought the product to production (~255k lines of TypeScript) through agentic AI development (Claude Code, Codex): formal specifications and ADRs as the contract for agents, mandatory review, typing, lint, and 600+ test files as the quality gate
- Designed true end-to-end encryption of client personal data in line with the Russian personal data law 152-FZ (Web Crypto: AES-GCM, PBKDF2, passkeys/WebAuthn) — the server never sees the data
- Designed an event-driven backend with CQRS and a real-time SSE layer: JSON-patch state diffs, LLM response streaming, automatic reconnect, background workers for AI analysis
- Integrated a multi-provider AI layer (DeepSeek, Cloud.ru, Yandex SpeechKit over gRPC) with fallback chains for provider outages, per-request cost accounting, and per-user budgets
- Set up infrastructure and zero-downtime CI/CD in Yandex Cloud: Docker, GitHub Actions with OIDC federation and no stored secrets, health-gated deploys, and cascade rollback

Web Crypto

Docker

GitHub Actions

Yandex Cloud

Oct 2019 – Aug 2025

Senior Frontend Developer

JTC (JSC "JT Consulting")

Russia, Saint Petersburg

- Designed and implemented CODELESS low-code platform data storage migration from file system to RavenDB, eliminating performance issues as projects scaled and enabling horizontal scaling
- Developed an automated isolated environment ("pod") creation system, replacing manual DevOps setup and reducing deployment time for new versions
- Built an innovative DOM-based code editor with real-time validation, autocompletion, and full typing — a key tool for accelerating project creation on the platform
- Migrated real-time communication from WebSocket to SSE, reducing server load by eliminating persistent bidirectional connections; implemented a typed API layer via Proxy
- Implemented a configuration comparison system in Web Workers, preventing main thread blocking when processing large data volumes
- Established code quality culture: Jest unit tests, custom documentation tool DNA (TypeDoc-based) with commit blocking on missing docs, video tutorials and regular demos for management
- Maintained and evolved the internal platform UI-KIT over several years, ensuring interface consistency and accelerating new module development
- Mentored CODELESS developers: assisted with onboarding, platform adaptation, and technical problem resolution

React

TypeScript

Node.js

RavenDB

Web Workers

SSE

Express

Jest

React Native

Oct 2018 – Oct 2019

Frontend Developer

JTC (JSC "JT Consulting")

Russia, Saint Petersburg

- Developed account, statement, and payment order modules for major bank digital banking systems (VTB, Gazprom Bank, UBRiR, Absolut Bank, Otkritie), serving millions of clients
- Created a standard page generator for digital banking, unifying architecture and accelerating new module development by several times

React

Redux

Redux Form

TypeScript

CryptoPro

Aug 2016 – Sep 2018

1C-Bitrix Developer, Frontend Developer

Recifra (LLC "Yugra Internet Solutions")

Russia, Khanty-Mansiysk

- Developed an order management IS for the regional HANS pizza chain (Dodo system analog): ordering, tracking, delivery
- Built a cross-platform KHMAO Gosuslugi mobile app for iOS/Android
- Created government portals for the Yugra Development Fund and Yugra Investment Portal

1C-Bitrix

jQuery

Backbone.js

Cordova

Framework 7

Personal Projects

Smart Cart Bot

AI-powered Telegram bot for comparing grocery store prices and automatically building optimal shopping carts

Features

- Fine-tuned Mistral 7B (LoRA, Q4_K_M quantization) on a custom dataset of 1500+ records for parsing natural language into structured data
- Designed microservices architecture: independent backend service + Telegram bot, connected via REST API and SSE
- Integrated APIs of four retailers (Pyaterochka, Magnit, Dixi, Perekrestok) with automatic price comparison and optimal cart formation

Education

Sep 2013 – Jun 2017

Yugra State University

Bachelor, "Computer Science and Engineering"

- KHMAO-Yugra Governor Scholar

Additional Information

Work format:

Remote work, hybrid format, open to relocation. Experience working in distributed teams using Agile/Scrum

Interests:

AI/ML, frontend application architecture, performance optimization
